

Intellective and Microsoft deliver industry-leading solutions for content and data management

Unparalleled Microsoft Expertise

Intellective works with Microsoft to deliver industry-leading solutions for Enterprise Content Management, Business Process Management, data storage and security, workflow collaboration, and Customer Relationship Management. As a partner, you benefit from our expertise with four primary Microsoft tools: Dynamics 365, SharePoint, Power Apps, and Azure.

Microsoft Dynamics 365

Intellective Unity for Dynamics delivers powerful enterprise search to give your customers a complete view of their repositories, workflows and content.

Our combined framework delivers these functions for end users within the Dynamics interface:

- A seamless, rich, and contextual view of enterprise data and content
- Advanced document management, case management, and task processing
- Enhanced Dynamics user engagement and productivity
- Complete data to make better informed business decisions

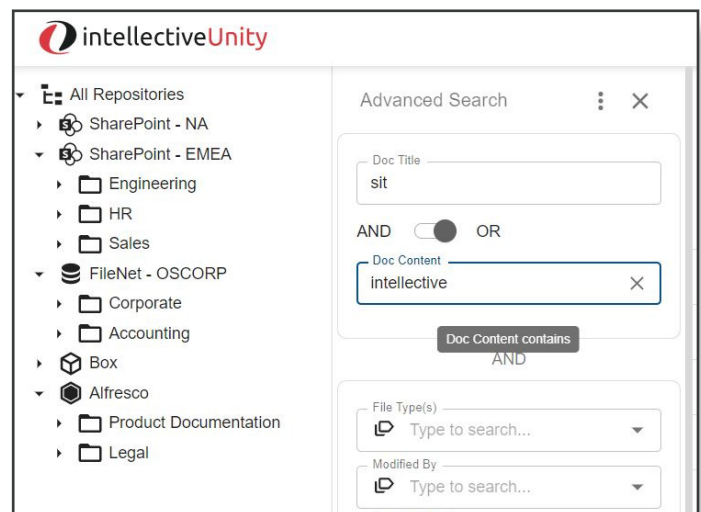

SharePoint Capabilities

Intellective Unity's advanced user interface displays multiple SharePoint sites and instances in a single view, allowing your customers to search and organize content more efficiently. Users can save and refine searches for content, titles, file types, creation and modification dates, and custom metadata.

This advanced search capability works with enterprise repositories within SharePoint as well as IBM FileNet, OpenText, Documentum, Box, and more.

Intellective Unity with advanced SharePoint connectors can be deployed in the cloud or on-premises. With our expertise and custom solutions, there's no need to offer your customers an entirely new data management system. Intellective Unity integrates with the repositories you already use.

Delivering with Power Apps

Intellective offers the capability to build customized apps to enhance your customer experience and expand your business. Our expertise with Microsoft Power Apps allows us to easily develop mobile and web apps for any business need—including data management, sales process management, enterprise content delivery, and business workflow tools like expense reporting or site inspections.

We build and deploy professional-grade apps for your customers that help increase agility, modernize processes and solve tough challenges across the organization, infusing digital transformation into manual and outdated processes.

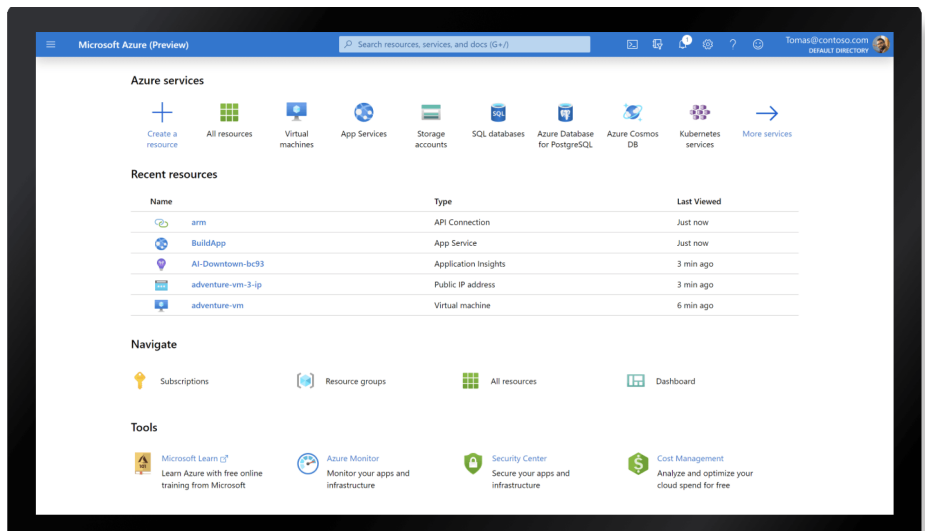

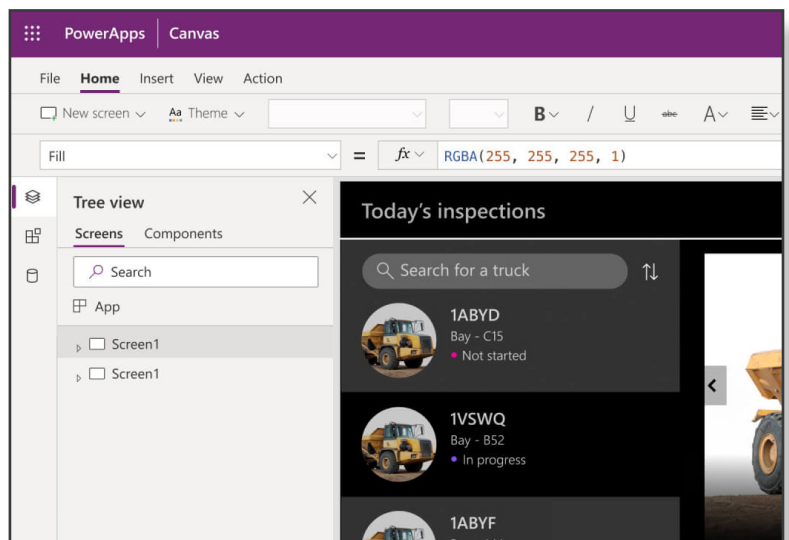

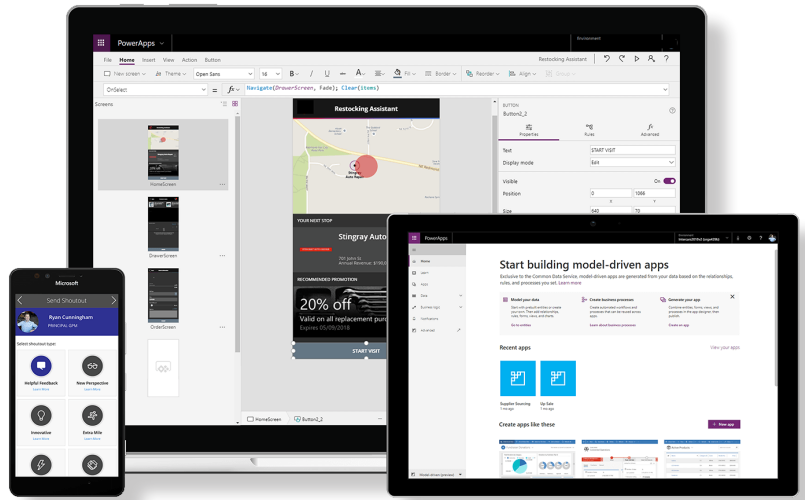

We can also support your professional development teams with the tools and experience to seamlessly extend app capabilities with Azure Functions and custom connectors to proprietary or on-premises systems.

Azure Compatibility

With the Azure cloud platform, we build connected, cross-platform experiences to help your customers modernize applications for Windows and Linux virtual machines across cloud and hybrid environments. With Azure's cloud-based products and services, we deliver custom-tailored solutions for your industry – across multiple clouds or on-premises environments.

Azure's open-source framework offers in-depth security backed by a team of experts, proactive compliance, and support for multiple languages and deployment scenarios.

Azure is the only consistent hybrid cloud that delivers unparalleled developer productivity, provides comprehensive, multilayered security, and the largest compliance coverage of any cloud provider. That's why 95 percent of Fortune 500 companies rely on Azure for trusted cloud services.
