

ABOUT

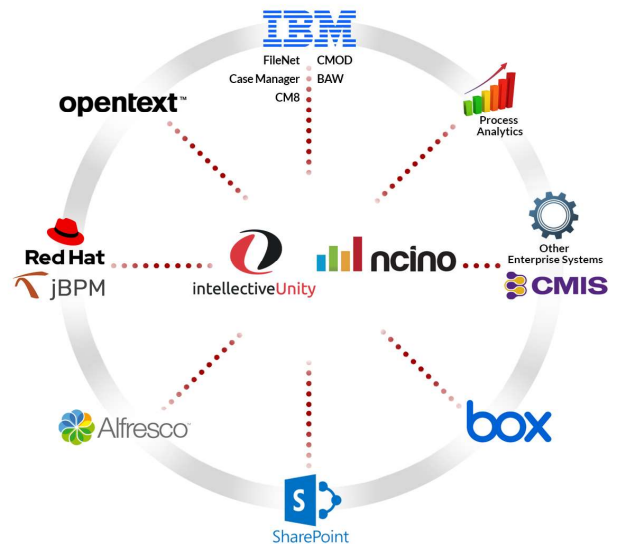

Intellective leverages its established Unity Content Management Integration platform to connect nCino with multiple Enterprise Content Management Systems, providing organizations with the following benefits:

- Seamlessly search, view and transact on enterprise content from within nCino
- Automated rules-based archiving of nCino content to any ECM
- Access nCino content from other enterprise systems
- Link content stored in external ECMs to nCino Document Manager placeholder
- Maintain access from nCino Document Manager to content stored in ECMs

How it works

Access to Intellective Unity Search Templates can be configured to any nCino Document Manager user interface (eg. Loans, Relationships, Collateral, etc). When a user selects a document stored in an ECM, returned from an Intellective Unity Search, they are provided with a list of Actions, including Add to nCino.

Intellective Unity integrates with nCino's ECMOffloader to provide the most advanced and trusted means of content archiving, with connectors to major Content Management Systems (e.g., IBM [FileNet-CMOD-CM8], SharePoint, Box, Alfresco, OpenText and others).
